TOOLS FOR A NEW AGE

During the course of human history, the use of tools evolved as a result of man interacting with his environment. Tools were vital to man's survival. The knowledge and experience he gained from the use of these tools enabled mankind to build and develop machines that permitted him to become more efficient and in many cases removed him from harm's way. Kraft TeleRobotics is dedicated to the development of tools and technology for use in hostile environments. For information regarding our manipulator systems for undersea ROV applications contact:

11667 West 90th Street, Overland Park, KS 66214 USA
