Brokk, Kraft, Ameasol: Leaders in Remote Intervention Technologies

In the spirit of innovation Brokk, Kraft and Ameasol are working together to provide a new generation of rugged, remote systems for use in hazardous environments. By combining the reach and mobility of a Brokk machine, the dexterity and intuitive control of a Kraft manipulator arm, and the advanced survey and field deployment capabilities of Ameasol, the most complex and demanding tasks can now be successfully completed in unstructured environments. These systems are able to perform the work of human hands, but from a safe remote location. The close collaboration between Brokk, Kraft, and Ameasol provides a range of new solutions for our Nuclear, Military and Commercial customers, which ensure personal safety, improve productivity and provide the operational flexibility necessary to adapt to changing environments.
